

ZIMBABWE EZEKIEL GUTI UNIVERSITY

FACULTY OF BUSINESS, ECONOMICS AND ACCOUNTING

DEPARTMENT OF ECONOMICS AND BUSINESS SCIENCES

EXAMINATION PAPER

COURSE CODE : CBM202
COURSE TITLE : BUSINESS RESEARCH METHODS
SPECIAL REQUIREMENTS : **FORMULA BOOKLETS; TABLES; CALCULATOR**
DURATION : 3 Hours
LEVEL : 2.2
DATE :

INSTRUCTIONS TO CANDIDATES:

1. No cell phones are allowed in the examination venue.
2. Answer **two** questions from **Section A** and any other **two** questions from **Section B**
3. Begin each question on a new page.
4. The number of marks allocated to each question or part question is shown in brackets
5. All questions carry twenty five marks

SECTION A

Answer any two questions from this section

Question 1

- a) With the aid of examples define the following terms:
- i) Business research (3 marks)
 - ii) Informed consent (3 marks)
 - iii) Construct validity (3 marks)
 - iv) Triangulation (3 marks)
 - v) Pilot study (3 marks)
- b) Making use of the Harvard referencing style, demonstrate how you can reference a journal article both 'in text' and in the 'reference list'. (10 marks)

(Total 25 marks)

Question 2

'There is no longer need to create new business theories, rather it is prudent to deduce business realities from existing theories'. Examine this statement by contrasting deductive and inductive research approaches citing relevant examples.

(25 marks)

(Total 25 marks)

Question 3

- a) Making use of examples compare and contrast theoretical framework and conceptual framework. (10 marks)
- b) Critically examine the challenges faced when choosing a sample (15 marks)

(Total 25 marks)

SECTION B

Answer any two questions from this section

Question 4

- a) Making use of business research examples, outline the main characteristics of a normal distribution (10 marks)
- b) Making use of examples distinguish between the following:
- i) Null Hypothesis and alternative hypothesis (5marks)
 - ii) Dispersion measures and centrality measures (5 marks)
 - iii) One-way Anova and two-way Anova. (5 marks)

(Total 25 marks)

Question 5

- a) A certain business person wanted to assess the relationship between opening hours and daily sales. Data collection was done for ten consecutive days and tabulated as follows:

Day	1	2	3	4	5	6	7	8	9	10
Opening Hours	10	6	7	8	9	5	4	10	10	12
Sales (units)	30	22	22	25	28	16	15	29	32	32

Using the data above:

- i) Calculate the Spearman's rank correlation coefficient (8 marks)
 - ii) Comment on your answer advising the business person (2 marks)
- b) The specific manufacture of a detergent realised an increase in the sales of his commodities. That propelled him to do a study in order to examine the variables related to the surge in sales. In order to find out the reality, data were collected and tabulated into mutually exclusive categories as follows:

		<i>Customer attitude</i>	
		Positive	Negative
<i>Repeat patronage</i>	High	36	15
	Low	19	10

Test at 5% level of significance if there is an association between customer attitudes and their repeat patronage behaviour and comment on the genuineness of the loyalty to the brand. (15 marks)

(Total 25 marks)

Question 6

- a) If the number of new Covid19 cases in a certain area per week are normally distributed with mean 80 and variance 64.

Calculate the probability that on a specific week:

- i) More than 90 cases will be recorded (3 marks)
- ii) Less than 80 cases will be recorded (3 marks)
- iii) Cases recorded will range between 70 and 90 (4 marks)

- b) Due to Covid19 pandemic, a certain business person with four retail outlets in different business centres started to realise a decline in overall sales. He decided to figure out if the sales are declining similarly in all the outlets. As a primary step he collected data using sales of four different products across all the retail outlets and tabulated the data as follows:

		<i>Business centers</i>				
		Glendale	Mazowe	Shamva	Bindura	
T e s t s t a t i s t i c a l	<i>Product Categories</i>	Lobels bread	29	25	20	18
		Sugar 2kg	14	15	10	11
		Cremora	30	24	16	11
		Geisha soap	8	10	4	5

% level of significance if there is a significant difference in the sales realised at the four mentioned business centres. (15 marks)

(Total 25 marks)

ZIMBABWE EZEKIEL GUTI UNIVERSITY
FACULTY OF BUSINESS ECONOMICS AND ACCOUNTING

STATISTICAL FORMULAE

Sample Variance: $s^2 = \frac{\sum(x-\bar{x})^2}{n-1}$

Sample Standard Deviation: $s = \sqrt{\frac{\sum(x-\bar{x})^2}{n-1}}$

Product moment correlation coefficient:

$$r_{xy} = \frac{n \sum xy - \sum x \sum y}{\sqrt{[n \sum x^2 - (\sum x)^2][n \sum y^2 - (\sum y)^2]}}$$

Spearman's rank order correlation coefficient: $r_{ho} = 1 - \frac{6 \sum d^2}{n(n^2-1)}$

Chi-squared Test Statistic: $\chi^2 = \sum \frac{(O-E)^2}{E}$

Z-score: $Z = \frac{x-\bar{x}}{s}$

Standardisation: $Z = \frac{x-\mu}{\sigma}$ Where $Z \sim N(0,1)$

T-score: $T = 50 + 10\left(\frac{x-\bar{x}}{s}\right)$

Student t-test: $t = \frac{\sqrt{(n-1)} \cdot \sum d}{\sqrt{n \sum d^2 - (\sum d)^2}}$

Total Sum of Squares $TSS = \sum x_{ij}^2 - \frac{G^2}{N}$

Group Sum of Squares $GSS = \sum \frac{T^2}{n} - \frac{G^2}{N}$

Block Sum of Squares $BSS = \sum \frac{B^2}{b} - \frac{G^2}{N}$

Residual Sum of Squares: One-way $RSS = TSS - GSS$

Residual Sum of Squares: Two-way

$$RSS = TSS - (GSS + BSS)$$

Faint, illegible text and table structure, possibly a regression model or data table.

$$F = \frac{MSB}{MSE} \text{ Where } F \sim F(1, N-2)$$

$$Y = 20 + 10(X - 1)$$

$$F = \frac{MSB}{MSE}$$

$$TSS = \sum (Y_i - \bar{Y})^2$$

$$GSS = \sum \frac{(\sum Y_i)^2}{n}$$

$$BSS = \sum \frac{(\sum Y_i)^2}{n}$$

$$RSS = 175 - 67$$

Area under the Normal Curve P(Zsz) From -3.49 to 3.62
